

**DOMINA SRL** wants to contribute to the growth of the well-being of the community through the balanced management of the environment to ensure sustainable development to protect future generations.

The Environmental Policy of **DOMINA SRL** is based on a coherent set of principles to which every objective, action and goal in the field of environmental management must refer.

### **Compliance with environmental legislation**

Ensure compliance with legislative and other environmental provisions by accessing, identifying, evaluating and monitoring each new provision.

### **Environmental prevention**

Prevent, eliminate and, if this proves impossible, reduce pollution and the use of natural resources, taking into account the best economically viable technologies available.

### **Environmental culture and professional growth**

Develop a sense of responsibility towards the environment at every level through adequate knowledge of environmental aspects with information, education and training initiatives commensurate with the commitment of everyone in the Organization. To this end, the Management of DOMINA SRL formally undertakes to ensure that the Environmental Policy is understood, implemented and supported by all collaborators.

### **Diffusion of environmental principles**

Disseminate within and outside the organization, with particular regard to suppliers who work on behalf of the company, the principles of the Environmental Policy as well as the results achieved in a logic of transparency and dialogue, encouraging the general commitment to Do not pollute.

### **Collaboration with interested parties**

Collaborate with all interested parties in compliance with local government policies to foster

dialogue, transparency and sharing in the most suitable places and to provide a contribution commensurate with one's role and prerogatives.

### **Continuous improvement of environmental performance**

Improve the results of the environmental management of its activities and services year by year in compliance with the Environmental Policy.

### **Management of environmental effects**

- Monitor and, where possible, reduce atmospheric emissions from fixed and mobile sources present in daily operations of the company;
- control the production and disposal of waste and liquid effluents trying, where possible, to reduce the quantities and the dangerousness;
- analyze and optimize energy and water consumption;

### **Management systems**

Monitor and improve the environmental impacts of its activities through the adoption of an Environmental Management System.

### **New projects**

Ensure the preventive assessment of environmental aspects in all activities by adopting, where possible, operational solutions with a lower environmental impact.

*The Management undertakes to disseminate, implement, maintain and periodically review this Environmental Policy on the basis of the evolution of the environmental, socio-economic and institutional context.*
